THE WORLD'S FIRST SUITCASE ROBOT ALL-IN-ONE

Travelmate is a revolutionary new type of robot. It's a robot in the form of a self moving suitcase that follows you and adjusts to your speed.

Travelmate can avoid obstacles, navigate through crowds and maneuver through uneven terrain. It can go up to 6.75 miles per hour and it moves completely on its own. You don't need to control it.

It's perfect for when you're going to work, heading to school, shopping for stuff or if you're traveling.

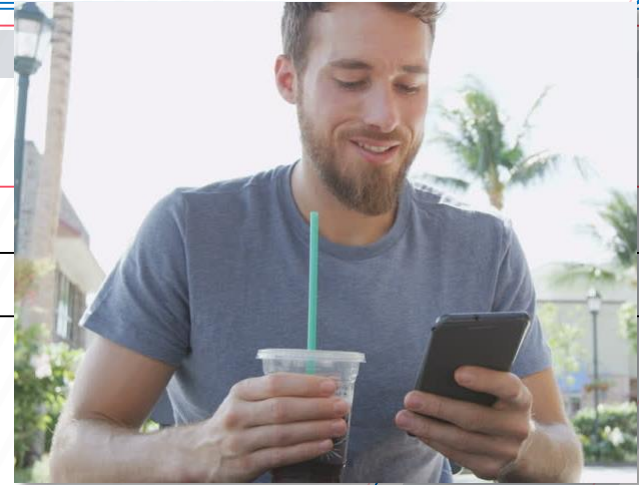

TRAVELMATE WILL REVOLUTIONIZE EVERYDAY LIVING

Travelmate is a revolutionary piece of technology. It'll re-invent your everyday lifestyle because it's the first practical consumer robot with the potential for thousands of features.

THE BIGGEST GADGET BREAKTHROUGH SINCE THE INVENTION OF SMARTPHONES

Take a look at the evolution of phones over the last hundred years; they started off with just being able to call someone. That's it. You had a tube attached to a cord that could call someone or receive calls from someone.

But then ten years ago, something radical happened. The first successful smartphone appeared. Suddenly phones had touch screens, thousands of apps and became a multi purpose device. It became a portable super computer.

THE BIGGEST GADGET BREAKTHROUGH SINCE THE INVENTION OF SMARTPHONES

When the first iPhone was announced, people thought to themselves, “why do I need a phone that does stuff besides calling?” Now though, most people can't live without a smartphone. It's that integral to peoples everyday lives.

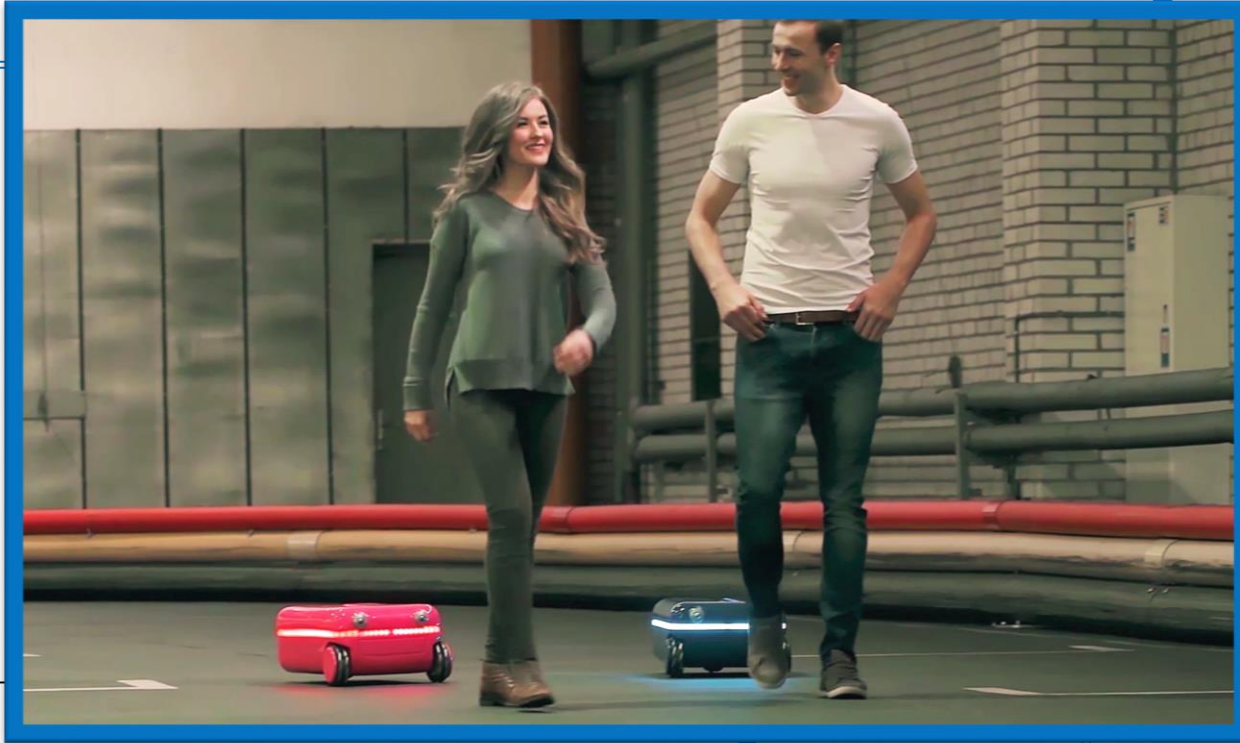

THE BIGGEST GADGET BREAKTHROUGH SINCE THE INVENTION OF SMARTPHONES

We're doing something similar for suitcases. They haven't changed much for the last 100 years. Sure, wheels have gotten better and materials have gotten more lightweight, but nothing has really changed.

THE BIGGEST GADGET BREAKTHROUGH SINCE THE INVENTION OF SMARTPHONES

We're changing that because we're combining robotics with suitcases to make the best of both worlds. Now with Travelmate, you have a robot that carries your stuff for you and has a myriad of different features.

THE FIRST PRACTICAL CONSUMER ROBOT WITH THOUSANDS OF FEATURES

Travelmate is creating a new industry of practical robots. It is science fiction turned into reality. Usually, you imagine robots in movies and TV shows, but now you'll be able to own one yourself!

Travelmate is always connected to your phone via the Travelmate smartphone app. It has its own section for add-ons. Much like the app store or the google play store. So you will always have new features to try out.

THE FIRST PRACTICAL CONSUMER ROBOT WITH THOUSANDS OF FEATURES

Here are some new features for Travelmate:

Travelmate can be used to monitor your house when you're not home. It'll sense if there are intruders or if there's something abnormal going on and alert you.

It can monitor your health and vital signs. If there's an emergency or if it senses that something is out of the ordinary, then you will now immediately. It can also send your information to your doctor.

You can play all sorts of games with Travelmate. You can even talk to your Travelmate and it'll respond to your commands.

It can act as a security patrol robot. If you're out of the office, it can make sure that your office is safe and alert you if something comes up.
